

1. INTRODUCTION

In all past Project Management courses, IET has been treating Contract Management as an integral of the Project Management. Following requests from practicing engineers and lawyers wanting treatise of Contract Management in relation to legal and enforcement implications, IET has adopted Contract Management Claim and Dispute Resolutions as a separate subject to stand on its own. This enables course participants to receive extensive information on the subject to include contracts specifics like classification, validity, features, and administration and construction risks.

This course aims at addressing contract legal requirements.

2. SUCCESSFUL CONTRACT MANAGEMENT

For a contract management to be successful, the client and the contractor must talk same language. A contract must be written in a language understood by all parties involved in the management of the project. The client must provide adequate resources in time and the contractor exercising good governance which targets use of skilled manpower. The contractor must use the expertise of identifying, monitoring and managing risks. A key to a successful contract management must be clear and providing adequate communication link between client and contractor. Good communication is always a make-or-break in managing relationships. The client/contractor relationship should recognize that a project is composed of diverse attitudes and behaviors which must be matched with project objectives and necessary therefore to seek solutions for the good of the project.

Managing a project is managing resources, and managing resources is managing money. In this aspect then, cost of project needs to be evaluated

against value for money. Value for Money (VfM) is a measure of effective, efficient and economic use of the resources.

3. COURSE OBJECTIVE

The Course objective is to equip the participants with knowledge of how to handle matters concerning the execution of a project targeting on resource management, Value for Money (VfM), Risk Management, level of communication. Attitudes and Behavior, occurrence, handling and resolving problems.
